Several weeks ago I asked the DPW Building Committee if it had explored two options for the proposed new DPW building.  
1) Outsourcing fleet maintenance (standard, emergency) to one or more of the Route 20 fleet maintenance companies. This would eliminate the need for a turbolift, reduce the height of the building, eliminate the need for most of the filtration plumbing, and minimize staff needs.  
2) Designing the building similar to a Jiffy Lube whereby the maintenance bay is in a sub-basement. This would also eliminate the need for a turbo-lift and reduce the height of the building.

Has the DPW committee considered either of these options?  
Thanks,
